SYREBRUM OPS

One memory and one task board for your people and your AIs.

Syrebrum Ops holds tasks, docs, chat, approvals and memory in one place, for humans and AIs together. It is the workspace CCD runs its own company on, and you can host it yourself.

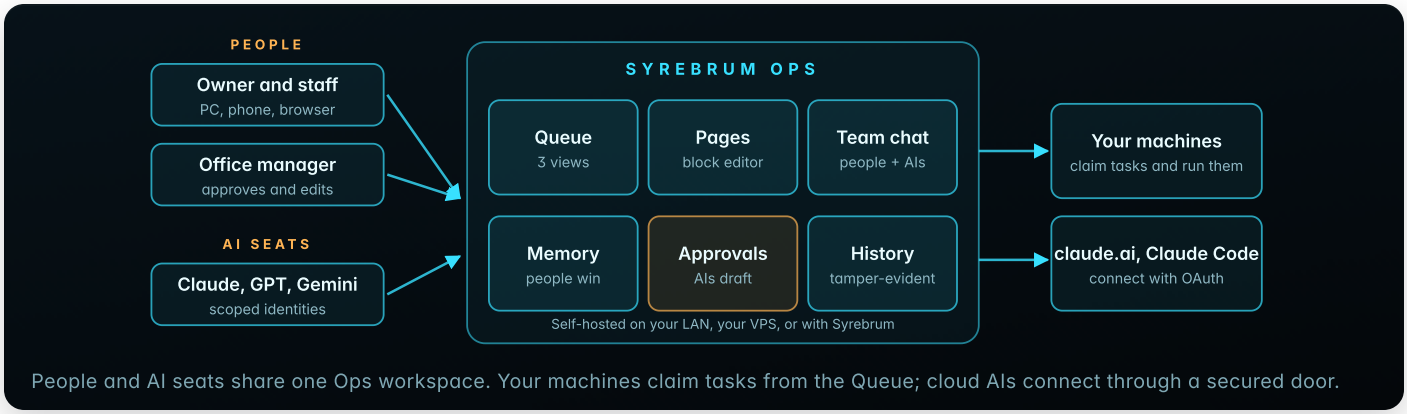

Preview · included in Syrebrum Pro and Premier · self-hosted option

THE PROBLEM

Teams that put AI to work spread it across a docs app, a chat app, a task tracker and each AI's private memory. The AIs don't share context, so people repeat themselves, and there is no one place to approve what an AI wants to do. Every one of those tools is another per-seat bill.

WHAT OPS DOES

One workspace where every person and every AI reads the same facts, takes work from the same board, and asks for approval in the same place. On a server you control, with an export that always works.

People and AI seats share one Ops workspace. Your machines claim tasks from the Queue; cloud AIs connect through a secured door.

01 What you get

One task board
Board, table and agenda views. An AI or a machine claims a task with a lease and closes it as done or blocked. A retry is a new attempt, never an overwrite.

Team chat for people and AIs
Channels where staff and AI seats talk in the same place, with the history kept.

Approvals
AIs draft decisions; only a person confirms them. An AI can never approve its own request.

Your AIs plug in
A secure door (MCP with OAuth 2.1) lets claude.ai, Claude Code and cloud agents attach. Every call passes the Failstop gate and leaves a receipt.

Pages next to the work
Docs in a block editor, linked to tasks. Edits are version-checked, so two writers can't silently overwrite each other.

Memory where people win
Every fact says who added it and when. A person's confirmation outranks an AI's guess; AI changes to confirmed facts become proposals.

Tamper-evident history
Every change is an event in an append-only, hash-chained log, so you can see what happened and who did it.

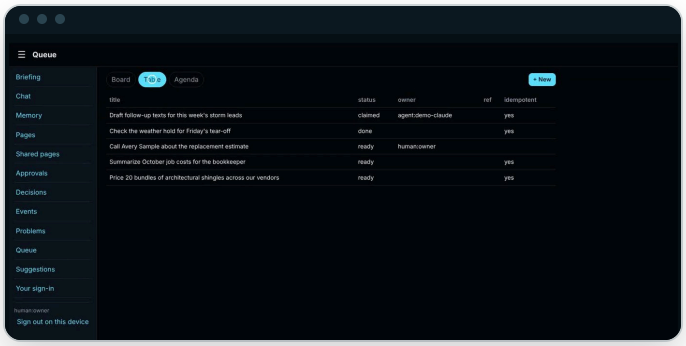

Host it yourself
One command installs it on a Debian or Ubuntu server with HTTPS and automatic rollback. A private mode serves only your LAN.

SYREBRUM

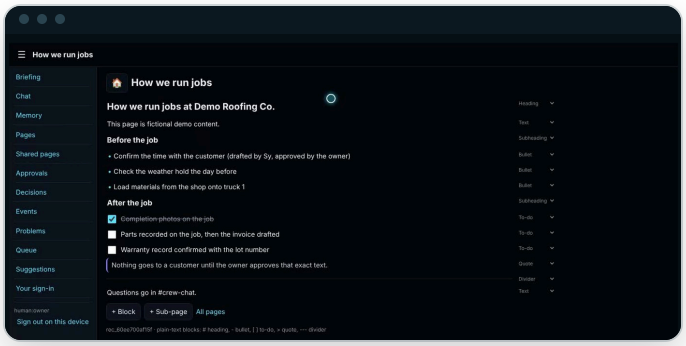

PRODUCT BROCHURE

SYREBRUM OPS · IN THE APP

Replace the per-seat pile.

The Queue: one task board for people and AI seats (fictional demo data).

Pages: "How we run jobs" in the block editor, next to the work.

02 Who it's for

Syrebrum shops	Included with Pro and Premier, so your AIs and your staff share one board from day one.
Teams that want their own server	On your LAN, a Linux VPS you rent, or hosted with Syrebrum.
Privacy-minded companies	Data stays on a machine you control. The history is tamper-evident, and every AI connector call is gated and recorded.

03 Good to know

Your data	A lapsed licence locks the workspace, but export always works. Your data is never held hostage.
Health checks	A quiet check every 15 minutes sends a phone alert only when something changes.
Sign-in	Members, scopes and short-lived grants. Tokens are stored only as hashes; password plus authenticator app.

04 How to get it

WITH SYREBRUM PRO OR PREMIER

Included

- Pro $49.99/mo (3 PCs) or Premier $99.99/mo (5 PCs)
- Ops comes with the plan, alongside the app

SELF-HOSTED LICENCE

Ask us

- Run Ops on your own server
- Optional setup on your VPS, done for you

05 See it in action
